

Neonatology

CHOC Children's Specialists Neonatology proudly offers a team of board-certified neonatologists with privileges at more than a dozen hospitals across Southern California. With 67 beds in Orange and another 22 beds in Mission Viejo, our neonatology program is ranked among the top 20 in the country by *U.S. News & World Report*.

Our neonatologists provide advanced care for critically ill infants including those referred for surgical emergencies, medical, genetic, neurologic and metabolic problems as well as the tiniest babies, those born between 24 and 28 weeks gestation or weighing less than 1,000 grams.

Innovative specialty care programs include the Small Baby Unit, the Surgical NICU, body cooling for neurocritical care, neo-cardiology, ECMO and neonatal transport.

Cooperation, Communication, Coordination, Continuity

Families are an important part of a baby's care team. Parents are invited to attend daily interdisciplinary rounding with their baby's team. Our neonatologists provide around-the-clock, in-unit coverage at all CHOC NICUs and most other sites served.
